Lift tables or scissor hoists could raise both people and materials vertically. They are usually utilized in construction, commercial and industrial environments. Usually, the use of a scissor lift is to lift and lower objects from one floor of a jobsite to the next. These equipment allow ergonomic transfer of stuff to be done efficiently and safely. By doing tasks like transporting inventory materials from ground floor to the highest level of a building, the manpower that previously was required to do such a task has been very much reduced. Scissor platform lifts could be easily operated by a person and could finish the work of lots of individuals.

### 1. Efficiency

Scissor platform lifts have significantly benefited construction operations as the work that used to need a lot of effort and many individuals, can now be completed utilizing the scissor lift and only one person, the operator. Lots of workplace related injuries have been avoided and prevented all together by using this piece of machinery. The scissor lift truck makes transporting supplies to levels higher than before or transferring stock from the highest stack down to the lower floors a much more efficient and safer method.

### 2. Capacity

Ever since their introduction, the performance, features and capacity of the scissor forklift has significantly improved. These days, there are maintenance function scissor platform lifts presented with the capacity of up to four thousand pounds and which have height ranges of up to 35ft. Manufacturers of scissor platform lifts have had to meet the demands of lifting materials with heavier cargo. A few producers have introduced larger capacity platform lifts that could be integrated into vehicles like vans and pickup trucks with height ranges of up to twenty feet and a capacity of ten thousand pounds.

The basic unit of scissor hoists typically seen in the lobbies of commercial buildings are self-propelled scissor platform lifts. These are usually utilized today by commercial establishments, hotels, warehouses and businesses. For example, maintenance cleaning of walls and hotel lobby halls will typically need lots of employees, and be a potentially dangerous and time consuming task to finish were it not for the availability of this indoor model of scissor forklift. These indoor scissor lift truck types occupy minimum floor space and have a reach capacity of as much as 35 ft. Utilized for inside building repairs; these equipment with their extended reach capacity are designed to have minimal platform work space so as to get to small-spaced corner spots of complex commercial buildings and hotel lobbies.

### 3. Handy Features

Self-propelled scissor lifts have control panels that are always accessible to the operators. Several units in today's market allow extendable platforms. This allows the operator to extend or minimize their platforms in response to their workspace availability at different levels. This is a useful feature depending on whether the equipment is operated outdoors or indoors.

Added options on several scissor platform lifts are platforms that could handle additional load and bigger platforms for lifting. Many manufacturers are now overlooking and addressing a few of the needs of various different industries. For instance, hotels and commercial buildings that have smaller entrance halls together with highly elevated lobbies could use units with higher elevation capacities that are constructed to fit into narrower spaces. The platform work area is adjusted depending on the workspace available.

### 4. Moving Requirements

For outdoor construction sites, there are units made that could travel in rough terrain. Several of these hoists are manufactured with cabin type platforms so as to allow the operator and platform user the ability to bring all their supplies with them while working 20ft above ground outdoors. Oftentimes, with construction sites in an open space and outside environment, there may be the need to move an whole office desk to an elevated level so as to properly supervise construction activities. The scissor lift truck is the ideal tool to do this task.
