

Attachments for Toyota Forklifts

Ever since 1992, Toyota Material Handling inc., U.S.A., also referred to as TMHU, have been the best selling lift truck dealer in the U.S. This company has been situated out of Irvine, California for well over 40 years, offering a comprehensive line of quality lift trucks. With a great reputation of stability and reliability, Toyota lift trucks have thrived in the competitive resources handling market. Quality is the keystone of Toyota's notorious Toyota Production System practiced at all manufacturing facilities, including TIEM, which stands for Toyota Industrial Equipment Manufacturing, situated in Columbus, Indiana. The majority of the Toyota lift trucks sold in the U.S. are built here.

Every one of Toyota's manufacturing plants within Canada and the U.S. comply with the International Organization for Standardization or ISO 14001 standard. TIEM has been honored many times for its commitment to persistent improvement, and its environmental systems. It is the first and only maker to offer EPA and CARB-certified Compressed Natural Gas powered lift trucks on the market. For example, the Toyota 8-Series IC lift trucks emit 70 percent less smog forming emissions than the current federal EPA standards and have complied with California's strict emission standards and regulations.

Toyota Material Handling, U.S.A. - The Industry Leader

The head of Toyota Material Handling, U.S.A., Brett Wood feels that TMHU's achievement comes from its dedication to construct high quality lift vehicles at the same time as offering first-rate client support and service. "We must be able to learn and predict the needs of our customers," said Brett Wood. "As a leader, our success also depends on our ability to address our customers' operational, safety and environmental cost issues." TMHU's parent company, Toyota Industries Corporation, also called TICO, is listed in Fortune Magazine as the world's principal lift truck supplier and is among the magazines prominent World's Most Admired Companies.

New Meaning to Environmental Accountability

Toyota Industries Corporation, as the parent company, has instilled a rich corporate doctrine of environmental stewardship in Toyota. Not many other corporations and no other lift truck manufacturer can match Toyota's record of caring for the environment while concurrently encouraging the economy. Environmental accountability is a key feature of corporate decision making at Toyota and they are proud to be the first and only maker to offer UL-listed, EPA- and CARB-certified Compressed Natural Gas powered lift vehicles. Yet an added reason they remain a leader within the industry.

Toyota originally launched the 8-Series line of lift trucks in 2006, again exhibiting its leadership and innovation in the industry. Featuring an exclusive emission system that eclipsed both Federal EPA emission principles, and California's more environmentally friendly emission standards. The finished invention is a lift truck that creates 70 percent fewer smog forming emissions than the present Federal standards tolerate.

Furthermore in 2006, Toyota established a relationship with the Arbor Day Foundation, furthering their obligation to the environment. Upwards of 57,000 trees have been planted in community parks and national forests damaged by ecological reasons such as fires, as a product of this relationship. 10,500 seedlings have also been circulated through Toyota Industrial Equipment's network of dealers to non-profit organizations and neighborhood customers to help sustain communities all over the United States

Industry Leader in Safety

Toyota's lift vehicles offer superior durability, visibility, output, ergonomics, and all the foremost safety technology that has made Toyota an industry leader. The company's System of Active Stability, also called "SAS", helps decrease the chance of accidents and accidental injuries, in addition to increasing productivity levels while minimizing the likelihood of merchandise and equipment damage.

System Active Stability senses several elements that might lead to lateral instability and possible lateral overturn. When any of those conditions are detected, SAS instantaneously engages the Swing Lock Cylinder to stabilize the rear axle. This alters the lift truck's stability trajectory from triangular in shape to rectangular, offering a major increase in stability which substantially reduces the likelihood of a mishap from a lateral overturn. The Active Mast Function Controller or the Active Control Rear Stabilizer also assists to avoid injuries or accidents while adding durability.

SAS was first launched to the market on the 7-Series internal combustion products in 1999 and subsequently catapulted Toyota into the industry leader for safety. Ever since then, SAS continues to be built-in to the majority of Toyota's internal combustion models. It is standard gear on the latest 8-Series. There are more than 100,000 SAS-equipped lift vehicles in operation, exceeding 450 million hours combined. The increased population of SAS-equipped vehicles in the field, along with mandatory operator training, overturn fatalities across all designs have decreased by 13.6% since 1999. Also, there has been an overall 35.5% fall in industry wide collisions, loss of control, falls and overturn from a lift vehicle for the same period.

Toyota's standard of excellence reaches far beyond its technological achievements. The company maintains a widespread Operator Safety Training curriculum to help clients meet OSHA standard 1910.178. Training services, videos and a variety of resources,
