

Attachments for JLG Forklifts

Following retirement in the late 1960's, John L. Grove embarked on a cross country RV trip. After spending numerous years establishing his family built crane company with his brother, John had no idea that this journey would bring about the rise of JLG Industries, Inc. The world leader of mobile aerial work platforms and precision material handling technologies was the end consequence of a road expedition.

While on their trip, John spent time conversing with previous business acquaintances whom the Groves stopped to see along the way. These conversations combined with a tragic incident-two workers being electrocuted on scaffolding when the Groves were traveling to the Hoover Dam- John uncovered a vast marketplace for a product that could swiftly and safely elevate individuals in the air to accomplish upkeep and other construction services.

Upon returning from their travels, John formed a joint venture with two friends and acquired a metal fabricating business in McConnellsburg, Pennsylvania. In 1970, opening operations with a crew of twenty workers, they created and sold the first JLG aerial work platform. The company incorporates some of the simple design essentials of that original lift into current designs.

Since then, JLG Forklifts have come a long way from when Mr. John L. Grove came back from his fateful cross-country journey and since the first JLG aerial platform entered the marketplace. As of today, the company has expanded itself into quite a few global marketplaces and continues to cultivate new equipment to guarantee that clients are able to become safer and more resourceful within their workplace.
